
ROLLER-TEAZLE COMBING and FINISHING MACHINE LANA PR

The LANA PR is an approved finishing machine for combing open wild furs like musquash, marten, fitch, sable, ocelot, nutria and rabbit.

The machine combines solid construction, simple handling, and a maximum output capacity.

The feeding of fur skins is effected by two acid proof synthetic rollers, which are adjustable to forward and reverse movement. The feeding speed is continuously variable from 1 to 6 m/min. Slow passage results in strong combing, fast passage in light combing. The steel roller-teazles guarantee a most careful treatment of furs.

The machine is provided with a built-in connection for suction device, the strong LANA single suction is available on demand.

Capacity: approx. 300 – 350 musquash skins per hour

Technical data:

LANA PR

Working widths: 100 cms / 120 cms / 140 cms / 160 cms / 180 cms / 200 cms

Feeding motor: continuously variable 7 – 42 rpm

Feeding speed: 1 – 6 m/min.

Feeding drums: Ø 55 mms.

Combing drum: Ø 350 mms.

Combing drum speed: 200 rpm

Pressure brush: Ø 100 mms

Dimensions of machine:

LANA PR 100/200

width: 140 cms / 240 cms
depth: 90 cms / 90 cms
height: 100 cms / 100 cms
weight: approx. 300 kgs / 500 kgs

Connected load: approx: 0,7 kW, 400 volts, 3 phase
