

STAKING WHEEL LANA STAW

This well-known and completely redesigned finishing machine is best suitable for stretching, cleaning and softening every type of fur skin, especially also lamb- and sheepskins and in smaller construction also for the furrier.

The machine is driven by a strong incorporated gear motor with V-belt-drive with 43 Rpm. Upon request, the machine can be equipped with a frequency converter to vary the speed.

62 blunt blades provide a stretching into width and length of the fur skins. This construction smoothes wrinkles and stretches skin fibre in its natural direction of growth.

Solid construction - stretching wheel balanced - silent running -
On request available with incorporated suction device.

Wheel-diameter: 700 – 1000 mms

Capacity: approx. 120 - 150 mink skins per hour
